

ABSTRACT

The present invention relates to a protein derived from a microorganism belonging to the genus *Bacillus*, which has an activity of hydroxylating a compound represented by the formula (I-a):

wherein R¹ represents a hydrogen atom, a substituted or unsubstituted alkyl, or an alkali metal, and R² represents a substituted or unsubstituted alkyl or a substituted or unsubstituted aryl,
or a ring-closed lactone form thereof;
a DNA encoding said the protein; and a recombinant DNA comprising said the DNA.
